MOBILIZE YOUR WORKFORCE

with SMS Shop Floor Data Collection for SAPB1

Shop Floor Data Collection Delivers:

Improved productivity: Extending handhelds to the shop floor or warehouse means up to date information at the pickers, packers, and operator's fingertips. This up to date information translates into real-time efficiency gains.

No "store and forward database", SFDC connects directly to SAP Business One and records transactions in real-time.

The ability to **choose either perpetual or SaaS license models** to fit your business and budget.

Customize your transaction set: Shop Floor Data Collection can be customized to fit your specific needs.

Label Printing and Design: Print barcode labels from the standard transaction sets or have SMS custom design labels for your specific requirements.

Our Experts are ready to help!

The SMS Group is recognized as a leader in data collection integration, solving customer issues by applying a combination of network, custom programming, and scanning solutions that can be deployed on mobile as well as traditional devices. Our thirty years of solutions and on staff programmers can integrate diverse data technologies, collection, distribution and processing to create efficiencies that will generate accurate, reliable, real-time information.
